

ITAI 1371 Introduction to Machine Learning

Professor Viswanatha Rao (Vishwa)

Assignment: Lab 04 Exploratory Data Analysis

Group Member Contributions

Monepha Mitchell

I organized and drafted the group contribution journal. I also reviewed the assignment requirements and communicated with the team to make sure everyone was on the same page and had completed their individual parts.

Ved Dalwadi

For the experiment section, I worked on the port of embarkation and fare. The countplot showed a high number of people in Southampton, but it had the most deaths; however, Cherbourg was the only port that had more survivors. At first, I believed that it did not matter and was just luck, but as I discussed it with the group, I understood that patterns occur for a reason, and I found out that these people were the same with the higher wealth status. I also saw that the age histograms matched that children were prioritized. This helped me and my team understand the core premise of EDA as we all thought through it together.

Nigel Bontif,

I contributed to the Module 4 Lab by working through and completing the lab independently in order to fully understand the learning objectives related to Exploratory Data Analysis. I also helped group members by discussing questions about the assignment, clarifying parts of the lab when needed, and participating in conversations about how the updated submission policy should be handled through GitHub.

Final Review: As a team, we each reviewed each other's work. We discussed the notebook sections together, compared our answers, and helped one another understand any parts that were confusing. After making sure our notebooks were complete, the required cells ran correctly, and the outputs were visible. We each submitted our version to the GitHub repository for the final group submission.
