

ITAI 1371 Introduction to Machine Learning

Professor Viswanatha Rao (Vishwa)

Assignment: Lab 03 Exploratory Data Analysis

Group Member Contributions

Monepha Mitchell

I completed my individual lab notebook and participated in group discussions throughout the assignment. We discussed the machine learning workflow, compared the results of the logistic regression and decision tree models, and helped each other understand how to interpret the evaluation results.

Ved Dalwadi

I completed the Lab Notebook and ran and understood the 6 steps of the ML workflow. When we were talking about the features for the experiment, I chose alcohol, hue, and flavonoids, which got me the highest percentage out of all 3 of us. I explained that this is better than the other solutions they chose, as it has more distinct qualities. I also wrote my reflection based on my discussion on what would happen with all 13 features being used

Nigel Bontif

I did my own notebook, and I contributed to group discussions. We talked about the ML workflow and compared our different feature selection result. I chose Alcohol, Color intensity, and proline. After we all compared, I brought up how the train/test is an important step that makes sure the model is not just remembering.
